2 = IF (not (year (year (today ()) = year ((date sold) 3)), "Sale did not occur this year", "the sale this year") returns that the sale of string It has not occurred this year "if the year in line 3 of the date column sold is not equal to the current year. There are also several unique unique functions for Smartsheet, including functions of Hierarchy as children. In the right field configurations, select the Logic tab and select Add Logic. Click Add at the bottom right of your rule to add it to the source field. I'm not sure of the your type of plan or if you have a license? You can also create graphics in the sheet summary to save space on your grid. Formulas can include functions such as SOMA, AVG and SE. Tips for Use Conditional Logic Use these tips for creating more versatile rules with conditional logic: Choosing an appropriate operator from the blue neighborhood to the condition of your rule can help you ency RTAR your rule and reduce the need for several rules. When a line rule affects a field or destination element, it will be shown when any of the rules are satisfied. "If you hide a field with the hidden switch in the field configurations, any rules associated with this field are replaced. Smartsheet forms are linked to the sheet, so if you change the Type of field or values on the sheet, it may affect the conditional logic in the forms on this sheet. Create a form and conditional display fields to create a new form and add rules to display conditionally Fields and other form elements: Open the sheet that you want to attach the form. Select the field that determines which other field elements and forms are displayed based on its value. The person who uses the form chooses IT equipment as their type of request. If you are using a Smartsheet evaluation version, you can create forms, but these forms can not be shared. Does the sale occur this year still need help? Use the Smartsheet fan template to see examples and practice work with real-time functions. Find examples of how other Smartsheet customers use this function or ask about your specific use case in the online community of Smartsheet. In stock = countif: [dress item], not (@cell = "coat") Account values that are not equal to the string coat in the dress item column River. Several fields related to IT equipment requests are displayed in form, while non-related IT support request fields are not displayed. In its condition a c " rule, which always begins with when, set the operator (varies based on the field type) and the value (s) of the source field that determines when the Fields and destination elements should be shown. Check out the list of functions to see all that are available. Learn more about the syntax to create and edit a formula in Smartsheet. The values inserted manually and the cell references can be used to create a formula. With the conditional logic in the forms, you can ensure that people who use the form only respond to questions that are relevant to sending, showing specific fields based on their answers to other questions. Editing the column type or values of the fields used in the conditional logic can affect the existing rules. If you remove a field from the form, the logic also associated can be removed. a a emrofinu oluqjAc mu racilpa uo sodacifcep sopmac a salumr'Al ranocidA edop \*Acov .oirjAlumrof on adartne amu raivne edop oirjAlumrof oa osseca moc aossep reuqlauQ .soirjAlumrof ratide e raire medop ahlnalp ad serodartsinmdA so e ahlnalp ad oirjAteirporp O edadinumoc A .egnahc .gnahc cigol teefta taht seulav ro sldief mrof fi detele ro detide era selur cigol lanoitidnoc .wodniw teehstrams eht fo tfel-pot eteErc< smrof tceles .nmuloc eritne
